Sustainable Water Solutions

"We never know the worth of water till the well is dry."

Welcome to GR8 Water

The GR8 Water team would like to welcome you to our technological revolution against the world's drinking water problems. GR8 Water, Inc. is poised to tackle the shortages, availability, quality and environmental concerns associated with drinking water worldwide. Whether your present source is municipal or mountain stream, GR8 Water's solutions offers superior results in comparison to all other types of potable water.

By using our patent pending "From Air to Water" GR8 Water products, you can be confident that your private water supply will not only be delicious and affordable, but also secure, pure and plentiful into the future. The applications for this innovative technological solution extend to the undeveloped world. With millions of men, women and children suffering and dying from water born diseases, GR8 Water intends to replace their hazardous and contaminated ground sources with the finest drinking water possible.

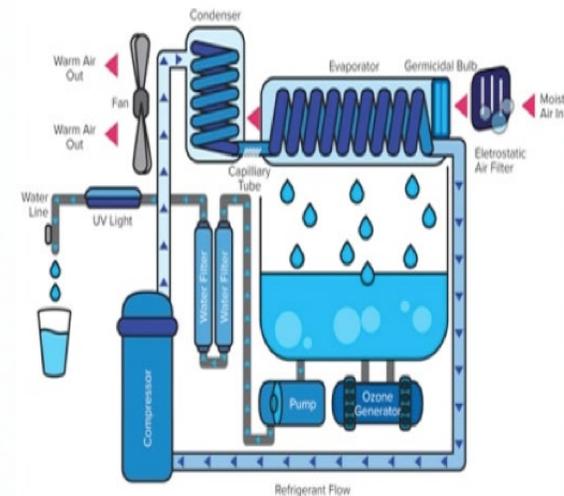

Made entirely in America from only the highest quality parts and materials, our GR8 private "Water Factories" are designed to last far into the future. By investing in your own, personal GR8 Water Factory for your home or office, you will be making an investment in the future of pure, sustainable and affordable water.

GR8 Water

Sustainable Water Solutions

How It Works

The GR8 Water unit is an intelligent device and is powered by a microprocessor, which ensures the proper operation of internal mechanisms that regulate, supervise and control the functions of system components.

Home & Office

WFR - 10

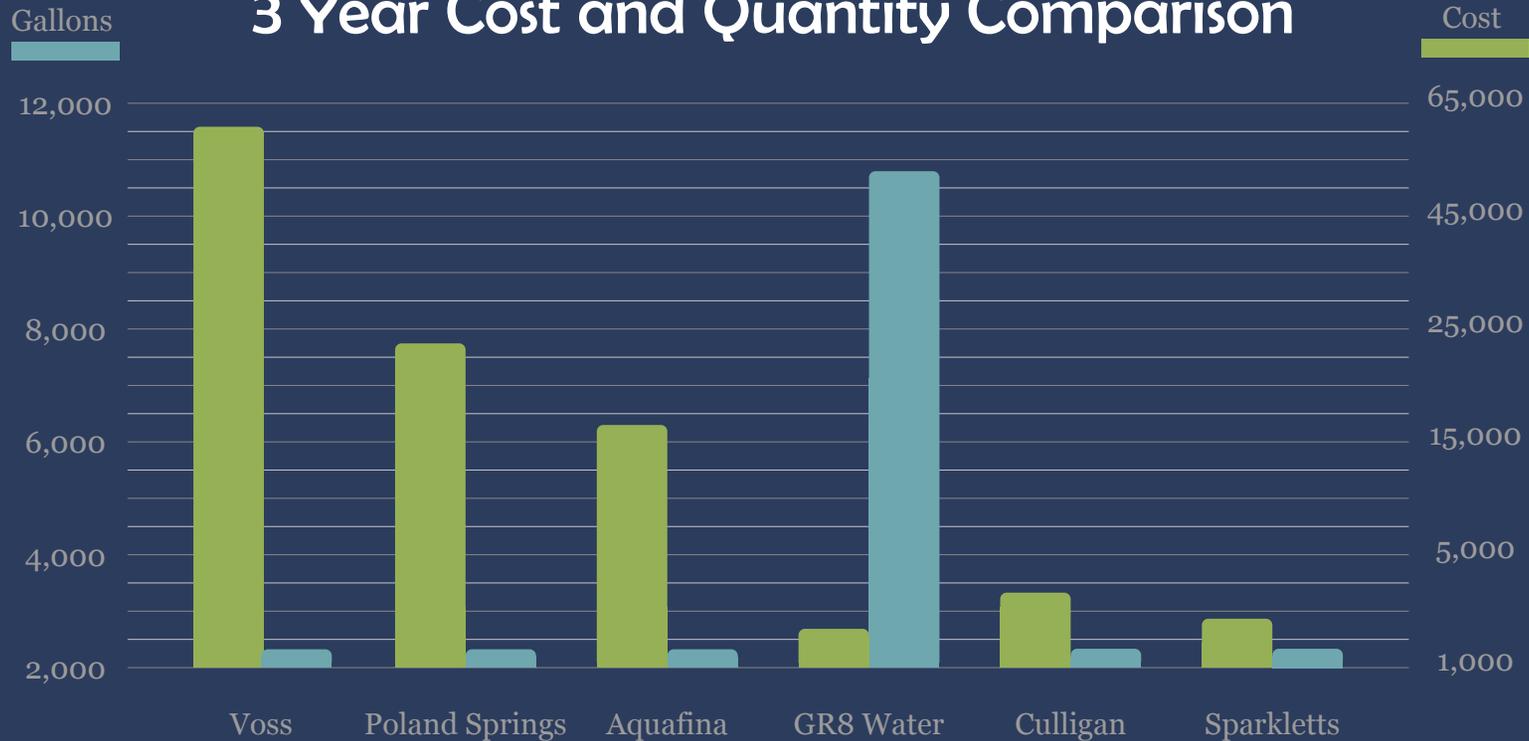

GR8 Water, Inc. is pleased to present its major breakthrough in pure water technology for the home and office: the GR8 Water Factory. The revolutionary technology behind our personal, Atmospheric Water Generators (AWG's) will change the way you think about your water consumption. The days of questioning the quality control of your personal water supply are in the past. GR8 Water's AWG's produce water that is ecologically friendly, safe, secure, free of chemicals and contaminants, cost effective, low maintenance, convenient, and plentiful into the future.

GR8 Water customers will be the first to taste the new science behind the company's proprietary AWG's and enjoy the benefits of ionization, ozonation, advanced filtration and ultra violet light sanitation of all bacteria. You will feel the enhanced security of owning your own "Water Factory" while simultaneously contributing to the greening of our environment – fewer plastic bottles in land fills.

Consider how you, your family and friends will feel once they know that the most precious resource on Earth will always be pure and available, even in the event of contamination of other water supplies. Thanks to GR8 Water, Inc's affordable, lease purchase option, this new water technology is available to the average family and businesses at prices lower than bottled water (pennies per gallon). When you see the design and color schemes of our GR8, personal Water Factories, you will be enticed to add them to your home and office décor.

3 Year Cost and Quantity Comparison

Assuming that a family of 4 consumes 60 gallons of water a month - the cost of water with competitors could reach over \$60K for 3 years. The GR8 Water Retail price of a WFR-10 unit is \$2,775 producing 10 gal. of water each day in proper conditions. With no money down, and over a three-year payment plan at a 6% interest rate, monthly investments into this technology would be \$81.71/mo, making it the cheapest method of water procurement in the long term. Additionally, at the end of those 3 years, you would attain full ownership of a piece of technology capable of producing 300 gallons of water each month.

COMMERCIAL & INDUSTRIAL

Imagine a world in which pure, affordable drinking water is available to everyone. With the use of GR8 Water's commercial and industrial Water Factories, this world is now within reach. With 11 model types, these GR8 Water Atmospheric Water Generators (AWG's) are designed to produce from 10 gallons/38 liters to 3,000 gallons/11,356 literes of pure water per day – with optional air conditioning on some models.

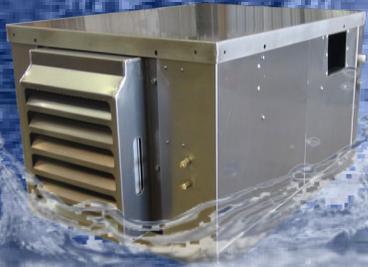

Applications for the AWG's are wide ranging. They can serve as modular "back up" units for municipal drinking water (in case a municipality would lose its water source to contamination or disaster). Excess water may also be bottled as a possible source of revenue or held in reserve.

Industries that may potentially benefit from GR8 Water's solutions include: restaurants, hospitals, schools, hotels/motels, restaurants, large institutions and military/emergency and disaster deployments.

But perhaps the "GR8est" benefit may go to people forced to rely on unsafe and far away drinking water sources. In many parts of the undeveloped world, people have no choice but to carry unsafe water for miles every day – unknowingly carrying disease and death to their families and loved ones. GR8 Water's solutions will help put an end to this human suffering and bring pure water to many villages and towns throughout the world.

WFC-10

FEATURES	
Unit	10 ton
Gallons per 24 hours	125 gallons
Stainless Steel Storage Tank	65 gallons
Height	69"
Width	44"
Depth	56"
Filtration System Exceeds N.S.F. Standards	

WFC-80

FEATURES	
Unit	80 ton
Gallons per 24 hours	1500 gallons
Stainless Steel Storage Tank	81 gallons
Height	104"
Width	108"
Depth	192"
Filtration System Exceeds N.S.F. Standards	

FEATURES

Unit	25 ton
Gallons per 24 hours	500 gallons
Stainless Steel Storage Tank	72 gallons
Height	74"
Width	48"
Depth	60"
Filtration System Exceeds N.S.F. Standards	

WFC-25

WFC-160

FEATURES

Unit	160 ton
Gallons per 24 hours	3000 gallons
Stainless Steel Storage Tank	81 gallons
Height	104"
Width	108"
Depth	192"
Filtration System Exceeds N.S.F. Standards	

Emergency Response

Just as pure water is the first priority for the human body, the “GR8 Water Factories on Wheels” is the first priority at any disaster scene or military deployment. If a picture is worth a thousand words, then please view the following GR8 Water Factories on Wheels image in a humanitarian light of saving thousands of lives around the world. If disaster strikes, GR8 Water Factories will be there to provide clean drinking water to the survivors – perhaps mitigating the disaster and providing some level of comfort...

Frequently Asked Questions

Can I really get pure drinking water from air that may have so many impurities in it?

Absolutely! The Water Factory process of multiple air and water filtration systems removes particulate matter smaller than .01 microns.

Is there enough water in the air to produce water every day?

There are 3.8 quadrillion gallons of water in the atmosphere at any given time.

How does the Water Factory work?

Our machines extract moisture from the atmosphere through a condensation process and transforms it into absolutely pure drinking water.

Is it expensive to produce water with the Water Factory?

The Water Factory atmospheric water generator is extremely efficient and uses a minimal amount of energy to produce water. Depending on local electricity costs, a gallon of Water Factory water costs about 16-32 cents per gallon to produce.

What about bacteria or other germs?

The Water Factory water generation process utilizes uv, ozonation and carbon filtration to eliminate any microorganisms including bacteria and viruses.

Is it difficult to install a Water Factory atmospheric water generator?

Our products require no plumbing, water lines or pipes and are easily installed. Just plug it in and start producing great tasting, chemically free drinking water!

Does the Water Factory have special power requirement?

Water Factory operates on standard 110 v power in the USA and 220 v power in most European countries.

Warranty

- 100% warranty for 1-year for parts only
- We offer 2-year extended warranties
- All warranties do not include air or water filters
- All component mfg warranties are included
