ABOUT FINJAN:

Founded in 1997, Finjan is one of the first companies to develop and patent proprietary technology and software that is capable of detecting previously unknown and emerging threats on a real-time, behavior-based basis, in contrast to signature-based methods of intercepting only *known* threats to computers, which were previously standard in the online security industry. Finjan continues to be a leading online security and technology company, developing and patenting new proprietary technologies related to software that proactively detects malicious code and thereby protects end-users from identity and data theft, spyware, malware, phishing, trojans and other online threats.
