

Company Overview

CytoDyn is a publicly traded clinical stage biotechnology company developing innovative treatments for multiple therapeutic indications based on leronlimab, a novel humanized monoclonal antibody targeting the CCR5 receptor. Leronlimab is being studied for oncology and inflammation.

Our current business strategy is the clinical development of leronlimab, which includes the following:

- i. Conduct studies exploring leronlimab and its therapeutic potential in oncology, including a Phase II trial of leronlimab in patients with relapsed/refractory micro-satellite stable colorectal cancer;
- ii. Conduct studies exploring leronlimab and its effects on inflammation; and
- iii. Continue our work researching and developing a new or modified long-acting version of leronlimab.

Other current programs that may be pursued include liver or other organ fibrosis, either alone or as a combination therapy.
