# Resonant to Present at LD Micro 500 Virtual Investor Conference

GOLETA, Calif., Aug. 24, 2020 (GLOBE NEWSWIRE) -- Resonant Inc. (NASDAQ: RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for mobile handset and wireless devices, today announced that management will present at the LD 500 virtual investor conference, hosted by LD Micro and taking place virtually September 1 – 4, 2020.

George B. Holmes, Chairman and Chief Executive Officer of Resonant, and Dylan Kelly, Chief Operating Officer, are scheduled to host a virtual presentation during the conference as follows and will participate in one-on-one meetings throughout the day. We expect 5G to be a big topic of these discussions and will plan to speak in detail about Resonant's XBAR technology and how it is shaping up to change the RF Filter landscape.

## LD 500 Virtual Investor Conference

Date: Thursday, September 3, 2020

Time: 1:40 p.m. Eastern time (10:40 a.m. Pacific time) – Track 4

Webcast: <https://www.webcaster4.com/Webcast/Page/2019/36738>

A live audio webcast and archive of the conference presentation will be available using the webcast link above. For more information on the LD 500 virtual investor conference or to schedule a one-on-one, please contact your LD Micro representative.

## About Resonant Inc.

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fabless ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

### **About Resonant's ISN<sup>®</sup> Technology**

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.
