# Clean Coal Technologies Inc., Announces Webcast to Update on Technology Testing and Corporate Financials

**NEW YORK, NY / ACCESSWIRE / January 28, 2016** /Clean Coal Technologies, Inc., (OTCQB: CCTC) ("CCTI" or the "Company"), an emerging cleaner-energy company utilizing patented technology to convert raw coal into a cleaner burning and more efficient fuel, today announced that the Management will update shareholders and investors via webcast on the positive results achieved during the initial testing of the Pristine M Technology at the AES Coal Fired Utility in Oklahoma. In addition there will be a comprehensive discussion of the on going testing and the scheduling of domestic and international clients together with government officials to our test plant in Oklahoma. Management will also update the market on the financial structure of the company and our strategic plans for 2016 as we enter this new phase in our corporate history. The webcast will take place on Tuesday February 2, 2016 at 10.00 am EST. The link to access the update will be posted on their website in advance of the webcast ([www.cleancoaltechnologiesinc.com](http://www.cleancoaltechnologiesinc.com)).

"As we enter the final stages of our test program and move towards the commercial stage Management feels that this is an ideal time to share with our investors and shareholders in more detail the significant advances the company is making towards successfully introducing our technology into the global markets at a critical time for both the coal and power industries," said President and CEO Robin Eves.

## About Clean Coal Technologies, Inc.

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine(TM)" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants.
