# Resonant Inc. Adds New Filter IP Standard Library and 5G Information to Company Website

- Provides additional information on website for new Filter IP Standard Library, including roadmap
- Unveils XBAR 5G video

GOLETA, Calif., Jan. 09, 2019 (GLOBE NEWSWIRE) -- Resonant Inc. (NASDAQ: RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for mobile handset and wireless devices, updated its company website to include its new Filter IP Standard Library, with upcoming product roadmap. The company also unveiled a video highlighting the benefits of its new XBAR technology for mobile 5G.

## **Resonant's Filter IP Standard Library**

With Resonant's Filter IP Standard Library, customers can bring RF filters to market quickly. In addition to shortening the time-to-market, the Filter IP Standard Library offers customers access to a stable and sustainable supply chain, does not require full custom engagement with associated development time and costs, delivers Tier 1 filter performance, and leverages Resonant's Infinite Synthesized Network (ISN) Foundry Program. To learn more about this innovative new product offering, including its upcoming roadmap, click visit the [Filter IP Standard Library](#) page of the Resonant website.

## **Resonant: Speeding the Transition to 5G**

The move from 4G technology to 5G promises tremendous performance improvements in services, such as video that demand high data rates. Meeting the time-to-market targets for new RF filters for 5G will be critical. Resonant's XBAR resonator structure is a technological breakthrough achieved using the company's proprietary ISN design process, which accelerates the design and deployment of 5G filters. To learn more and view the video, visit the [Videos](#) page of the Resonant website.

## **About Resonant Inc.**

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fabless ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

### **About Resonant's ISN Technology**

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.

### **Safe Harbor / Forward-Looking Statements**

This press release contains forward-looking statements, which include the following subjects, among others: the capabilities of our filter designs and software tools. Forward-looking statements are made as of the date of this document and are inherently subject to risks and uncertainties which could cause actual results to differ materially from those in the forward-looking statements, including, without limitation, the following: our limited operating history; our ability to complete designs that meet customer specifications; the ability of our customers (or their manufacturers) to fabricate our designs in commercial quantities; our customers' ability to sell products incorporating our designs to their OEM customers; changes in our expenditures and other uses of cash; the ability of our designs to significantly lower costs compared to other designs and solutions; the risk that the intense competition and rapid technological change in our industry renders our designs less useful or obsolete; our ability to find, recruit and retain the highly skilled personnel required for our design process in sufficient numbers to support our growth; our ability to manage growth; and

general market, economic and business conditions. Additional factors that could cause actual results to differ materially from those anticipated by our forward-looking statements are under the captions “Risk Factors” and “Management’s Discussion and Analysis of Financial Condition and Results of Operations” in our most recent Annual Report (Form 10-K) or Quarterly Report (Form 10-Q) filed with the Securities and Exchange Commission. Forward-looking statements are made as of the date of this release, and we expressly disclaim any obligation or undertaking to update forward-looking statements.
