## **About CymaBay**

CymaBay Therapeutics, Inc. is a clinical-stage biopharmaceutical company focused on developing therapies for liver and other chronic diseases with high unmet medical need. CymaBay's lead development candidate, seladelpar, is a potent, selective and orally active PPAR $\delta$  agonist currently in development for the treatment of patients with primary biliary cholangitis (PBC), an autoimmune liver disease, and with nonalcoholic steatohepatitis (NASH). Two Phase 2 studies of seladelpar established proof-of-concept in PBC. CymaBay is currently enrolling patients in a global, Phase 3 registration study of seladelpar for PBC. This study is a 52-week, placebo-controlled, randomized, Phase 3 study to evaluate the

safety and efficacy of seladelpar (ENHANCE) in patients with PBC. Seladelpar received orphan designation for PBC from the U.S. Food and Drug Administration (FDA) and the European Medicine Agency (EMA). Seladelpar also received Breakthrough Therapy Designation for PBC from the FDA and Priority Medicine status from the EMA. CymaBay is also conducting a Phase 2b proof-of-concept study of seladelpar for patients with NASH.
