Clean Coal Technologies (CCTC) Announces Partnership with ECED in Gillette, WY

NEW YORK, NY / ACCESSWIRE / September 10, 2020 /Clean Coal Technologies, Inc., (OTCQB:CCTC) ("CCTI" or the "Company"), the leading clean-energy company utilizing patented and proven technology to convert run of mine coal into a cleaner burning and more efficient stabilized fuel, today announced the signing of an MOU to formalize its partnership with Energy Capital Economic Development in Gillette, Wyoming. The ECED enables legislative, local and state economic development to provide strategies to encourage private sector development of companies to stimulate economic benefit.

"We are very proud to announce that CCTI has formally signed an MOU with Energy Capital Economic Development ("ECED") who are the owner and operator of the Wyoming Innovation Center based at the Fort Union location in Gillette, Wyoming" said Aiden Neary, CCTI, COO. "This partnership will provide us with infrastructural support when necessary as we advance our first of a kind technology at our Fort Union location. The Innovation Center is a very unique initiative and reflects the continued support by Wyoming in advancing the use of Wyoming PRB coal through technology"

"With the arrival of our \$1.3m Rotary Kiln at our site last month this partnership will provide our ability to supply processed coal feedstock to other businesses in the Industrial park and enable us to share infrastructure as we move towards being fully operational at our new facility" concluded Neary.

For information on the ECED visit: <http://www.energycapitale.com>

A CCTI funding update will follow.

About Clean Coal Technologies, Inc.

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants.
