Moleculin Biotech, Inc to Present at the Virtual Investor Roundtable Event

- Live moderated video webcast discussion among members of management and Thought Leader Sant P. Chawla, MD on Thursday, November 18th at 11:00 AM ET -

HOUSTON, Nov. 12, 2021 /PRNewswire/ -- **Moleculin Biotech, Inc.**, (Nasdaq: MBRX) (Moleculin or the Company), a clinical stage pharmaceutical company with a broad portfolio of drug candidates targeting highly resistant tumors and viruses, today announced that Walter V. Kemp, Founder, President, CEO and Chairman and Dr. John Paul Waymack, Senior Chief Medical Officer will participate in the [Virtual Investor Roundtable Event](#) on Thursday, November 18, 2021 at 11:00 AM ET.

Joining the Company's management team for the roundtable discussion will be Sant P. Chawla, MD, Director, Sarcoma Oncology Center, Director, Cancer Center of Southern California.

As part of the virtual event, the Company will provide a brief presentation, followed by a moderated Roundtable discussion and an interactive Q&A session. In addition to the moderated portion of the event, all investors and interested parties will have the opportunity to submit questions live during the event. Interested parties may also pre-submit questions in advance of the live event, which can be sent via the conference website at virtualinvestorco.com. The Company will answer as many questions as possible during the event.

A [live video webcast](#) of the Roundtable Event will be available on the [Events](#) page of the [Investors](#) section of the Company's website (moleculin.com). A webcast replay will be available two hours following the live presentation and will be accessible for one year.

About Moleculin Biotech, Inc.

Moleculin Biotech, Inc. is a clinical stage pharmaceutical company focused on the development of a broad portfolio of drug candidates for the treatment of highly resistant tumors and viruses. The Company's lead program, Annamycin is a next-generation anthracycline designed to be noncardiotoxic and to avoid multidrug resistance mechanisms.

In addition, Annamycin has been shown in animal models to reach higher concentration levels than doxorubicin (a leading anthracycline) in certain key organs, such as the lungs, liver and pancreas considered to be difficult-to-reach "sanctuary sites" for tumors. Annamycin is currently in development for the treatment of relapsed or refractory acute myeloid leukemia (AML) and soft tissue sarcoma (STS) lung metastases.

Additionally, the Company is developing WP1066, an Immune/Transcription Modulator capable of inhibiting p-STAT3 and other oncogenic transcription factors while also stimulating a natural immune response, targeting brain tumors, pancreatic and other cancers, and WP1220, an analog to WP1066, for the topical treatment of cutaneous T-cell lymphoma. Moleculin is also engaged in the development of a portfolio of antimetabolites, including WP1122 for the potential treatment of COVID-19 and other viruses, as well as cancer indications including brain tumors, pancreatic and other cancers.
