About Resonant TM

Resonant is creating innovative filter designs for radio frequency front-ends for the mobile device industry using a fundamentally new technology called Infinite Synthesized Networks®, or ISN®. The RFFE is the circuitry in a mobile device responsible for analog signal processing and is located between the device's antenna and its digital baseband. Filters are a critical component of the RFFE that select the desired radio frequency signals and rejects unwanted signals. For more information, visit www.resonant.com.
