Resonant Inc. to Present at the H.C. Wainwright 21st Annual Global Investment Conference

GOLETA, CA / ACCESSWIRE / September 4, 2019/ Resonant Inc. (NASDAQ:RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for mobile handset and wireless devices, is scheduled to present at the H.C. Wainwright 21st Annual Global Investment Conference in New York City. The event is being held on September 9th and 10th at the Lotte New York Palace Hotel.

Management plans to provide a business update and industry overview focusing on the company's recently announced Tier One partner's intent to invest and embark on a multi-design commercial agreement with Resonant, the company's unique Infinite Synthesized Networks® (ISN®) software design platform, and its 5G resonator technology. Resonant is the only company to combine an industry leading software design suite, a Filter IP Standard Library, and an IP licensing business model, to meet the rapidly changing needs of the RF market.

Resonant management will host one-on-one meetings throughout the day on Monday, September 9th and Tuesday, September 10th and is scheduled to present as follows:

H.C. Wainwright 21st Annual Global Investment Conference

Date: Monday, September 9th
Presentation Time: 3:25 p.m. ET
Location: Lotte New York Palace Hotel

The presentation will be webcast live and available for replay following the live presentation. The webcast can be viewed at <https://ir.resonant.com/events>.

About Resonant Inc.

Resonant (NASDAQ:RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fabless ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

conference calls, and webcasts.

About Resonant's ISN® Technology

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.
