Resonant Inc. Signs New License Agreements with Existing Customer

- *Two new designs licensed for modules using wafer level packaging; includes filter design for a 5G module*
- *One new design for discrete applications*

GOLETA, CA / ACCESSWIRE / July 9, 2019 /Resonant Inc. (NASDAQ: RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for mobile handset and wireless devices, announced an existing fabless customer has signed license agreements with Resonant, for three new designs.

“We are pleased to have received continued affirmation of our Infinite Synthesized Networks[®](ISN[®]) software platform and our ISN foundry program through the expansion of our contractual relationships with existing customers. This engagement will continue to support our business of delivering licensable designs to customers which enable new entrants to enter the market quickly and cost effectively,” stated George B. Holmes, Chairman and CEO of Resonant. “As this customer is a leading supplier of RF front-end components to the mobile phone market, it is already on phone OEMs’ Approved Vendor List (AVL), which means faster time to market for its products and our related royalty revenue.

“We are confident in our business model as we believe we are the only Pure Play solutions provider to the RFFE market for designs, IP, and software, that delivers designs on a per unit royalty basis. The overall mobile market transition to 5G is creating a tremendous opportunity to more rapidly deliver 2G, 3G and 4G solutions to our customers that need to get to market faster with lower costs. We are able to reduce the time to market of the designs even further with our Filter IP Standard Library introduced in December of last year. The 5G market transition, together with our deepening relationships with our customer base, are important steps toward the inevitability of our revenue growth and ability to deliver increased value for our shareholders.”

About Resonant Inc.

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant’s disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant’s fabless ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for

the demands of emerging 5G applications.

About Resonant's ISN[®] Technology

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.

Safe Harbor / Forward-Looking Statements

This press release contains forward-looking statements, which include the following subjects, among others: the status of filter designs under development, the capabilities of our filter designs and software tools, the timing and amount of future revenues, and our views on future financial performance. Forward-looking statements are made as of the date of this document and are inherently subject to risks and uncertainties which could cause actual results to differ materially from those in the forward-looking statements, including, without limitation, the following: our limited operating history; our ability to complete designs that meet customer specifications; the ability of our customers (or their manufacturers) to

fabricate our designs in commercial quantities; our customers' ability to sell products incorporating our designs to their OEM customers; changes in our expenditures and other uses of cash; the ability of our designs to significantly lower costs compared to other designs and solutions; the risk that the intense competition and rapid technological change in our industry renders our designs less useful or obsolete; our ability to find, recruit and retain the highly skilled personnel required for our design process in sufficient numbers to support our growth; our ability to manage growth; and general market, economic and business conditions. Additional factors that could cause actual results to differ materially from those anticipated by our forward-looking statements are under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in our most recent Annual Report (Form 10-K) or Quarterly Report (Form 10-Q) filed with the Securities and Exchange Commission. Forward-looking statements are made as of the date of this release, and we expressly disclaim any obligation or undertaking to update forward-looking statements.
