InfuSystem Implements Leading-Edge Electronic Medical Record Data Integration System at Florida-Based Oncology Practice

Provides Advanced Medical Specialties Seamless Information Flow and Significant Time and Cost Savings

MADISON HEIGHTS, MI -- (Marketwired) -- 01/21/14 -- InfuSystem Holdings, Inc. (NYSE MKT: INFU) ("InfuSystem" or the "Company"), a leading national provider of infusion pumps and related services for the healthcare industry in the United States, today announced it has successfully implemented a complete data integration project with Advanced Medical Specialties (AMS), a foremost Oncology practice in Miami, FL, that eliminates administrative overhead and is already delivering significant time savings for the staff at AMS.

"The new system creates value for both the practice and our patients," said Cathy Maxwell, RN, OCN® Director of Clinical Operations at AMS. "It has delivered meaningful time and cost-savings from day one. For example, by simply using a bar code scanner to associate a pump with a patient one time, we eliminate a number of associated administrative tasks. In turn, this allows us to concentrate more intently on the quality of service and care we provide to each patient. Results to date have already exceeded our expectations."

Manual processes for gathering patient data, capturing physician's orders and tracking the use of pumps are now fully automated. Necessary and appropriate patient demographic, insurance, diagnostic and clinical data used to order and track the usage of ambulatory infusion provided by InfuSystem now flows automatically and directly from AMS, using Varian's ARIA® electronic medical records system, to InfuSystem.

Eric Steen, Chief Executive Officer of InfuSystem, noted that electronic connectivity with customers is a key element of the InfuSystem growth strategy. "We are thrilled to see our efforts drive the kinds of efficiencies we anticipated with AMS. We have built a scalable, rapid-deployment model and we are committed to driving this type of cutting edge integration to the entire oncology community. We look forward to rolling out implementations with additional customers on EMR platforms in 2014."
