Resonant to Participate in Ascendant's Quarterly Management Discussion Series on December 19 at 1:00 Eastern Time

SANTA BARBARA, Calif.-- Resonant Inc. (Nasdaq:RESN), a late-stage development company that is creating innovative filter designs for radio frequency, or RF, front-ends for the mobile device industry, today announced that Chief Executive Officer Terry Lingren will participate in Ascendant's Quarterly Management Discussion Series teleconference on Friday, December 19 at 1:00 p.m. ET.

Interested parties may access the call by dialing +1-719-457-6209 and entering passcode 216781. A replay webcast link will be available on the investor relations section of www.resonant.com shortly after the call concludes.

About Resonant Inc.

Resonant is creating innovative filter designs for radio frequency, or RF, front-ends for the mobile device industry. The RF front-end is the circuitry in a mobile device responsible for analog signal processing and is located between the device's antenna and its digital baseband. The Company uses a fundamentally new technology called Infinite Synthesized Networks®, or ISN®, to configure and connect resonators, the building blocks of RF filters. Filters are a critical component of the RF front-end used to select desired radio frequency signals and reject unwanted signals. Resonant plans to use ISN to develop new classes of filter designs. For information, please visit www.resonant.com.
