

September 17, 2018

Resonant Inc. to Present at The MicroCap Conference in New York on October 1st

GOLETA, Calif., Sept. 17, 2018 (GLOBE NEWSWIRE) -- Resonant Inc. (NASDAQ: RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for wireless devices, is scheduled to present at The MicroCap Conference in New York City. The event is being held on October 1-2, 2018 at the JW Marriott Essex House.

Resonant management will host one-on-one meetings throughout the day on Monday, October 1st, and is scheduled to present as follows.

The MicroCap Conference

Date: Monday, October 1, 2018

Presentation Time: 8:30 a.m. ET

Location: Track 2 - JW Marriott Essex House - 160 Central Park S, New York, NY

The presentation will be webcast live and available for replay following the live presentation. The webcast can be viewed at <https://ir.resonant.com/events>.

About Resonant Inc.

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fables ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

About Resonant's ISN® Technology

Resonant can create designs for difficult bands, modules and other complex RF Front End

requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.
