Cocrystal Pharma, Inc. is a clinical-stage biotechnology company employing its unique structure-based technologies and Nobel Prize-winning expertise to create and develop first- and best-in-class broad-spectrum antiviral drugs for serious and/or chronic diseases. These technologies are designed to efficiently deliver small-molecule therapeutics that target the viral replication process and are safe, effective and convenient to administer. Cocrystal’s development programs include influenza, COVID-19, hepatitis C and gastroenteritis caused by norovirus.

**Investment Highlights**

- Applying proprietary structure-based drug design technology to develop broad-spectrum antivirals with high barriers to resistance.
- Large market opportunities for the treatment of acute and chronic viral diseases including influenza, COVID-19, hepatitis C and norovirus gastroenteritis.
- Near-term initiation of Phase 1 trial for potent, broad-spectrum treatment for seasonal and pandemic influenza A.
- Product candidates are tested for multiple routes of delivery including oral, inhalation and injection.

**Robust development pipeline** of antiviral programs including a Merck collaboration for seasonal and pandemic influenza.

**Seasoned leadership** includes biotech veterans with proven success in drug discovery and development, business and finance, and two Nobel laureates on the Scientific Advisory Board.

**Cost-efficient business** model with cash runway beyond 2024 and a clean capital structure.

**Technology Overview and Development Pipeline**

- Structure-based drug discovery platform featuring proprietary structural biology, enzymology and medicinal chemistry expertise.
- 3-D structure of inhibitor complexes at near-atomic resolution helps to identify novel binding sites and allows for the rapid turnaround of structural information through highly automated x-ray data processing and refinement.
- Broad-spectrum antiviral activity and high barrier to resistance for any virus strains by developing drug candidates that specifically target viral replication.
- Market-driven development programs aimed at expanding treatment options.

**Development Programs**

**Influenza A/B Collaboration with Merck**

- Potent dual influenza candidates expected to be active against seasonal, pandemic and existing drug-resistant influenza strains.

**January 2019**: Announced exclusive worldwide license and collaboration agreement with Cocrystal eligible to receive up to $156 million in milestone payments plus royalties on future net product sales.

**January 2021**: Announced the completion of all research obligations under the agreement to discover and develop proprietary influenza A/B antiviral agents. Merck has now assumed sole responsibility including funding for continued product development and commercialization activities.
### Pandemic Influenza A Program

**Addressing major U.S. and global concern:** Drug-resistant issues with currently approved therapies
- Exhibits broad-spectrum activity against seasonal and pandemic strains
- Favorable preclinical safety profile and pharmacokinetic properties
- Multiple routes of administration include oral, inhalation and injection

**2Q21:** Complete IND-enabling studies and selected CRO

**3Q21:** Initiate Phase 1 Study

### COVID-19 Programs

Targeting viral replication complex with potential *first-in-class therapeutic and prophylactic treatments.*

**2020:** Acquired exclusive patent rights and know-how from Kansas State University Research Foundation (KSURF) for coronavirus and norovirus therapeutics for human use

**4Q20:** Selected preclinical lead from KSURF-licensed inhibitors

**2Q21:** Lead shown effective against SARS-CoV-2 and two prominent variants

**2021:** Working toward pre-IND status with CDI-45205

- Developing additional COVID-19 inhibitors with novel mechanisms of action

### Hepatitis C Program

CC-31244, a liver-targeting, orally administered, best-in-class non-nucleoside inhibitor (NNI) effective against known NNI drug-resistant variants.

**Favorable Phase 2a study results in combination therapy**
- 6 weeks of Epclusa therapy including 2 weeks of CC-31244; well tolerated
- 8 of 12 subjects (67%) achieved virologic cure; 4 who did not reach virologic cure had low levels of a biomarker that can be used for patient selection going forward

**Benefits of ultrashort treatment strategy**
- Addresses limitations of existing long-term therapy: longer period for virus to replicate and mutate; increased risk of adverse events; greater opportunity for missed doses
- Proven rapid commercial success with shorter treatment regimens

**Seeking partner for further development**

### Norovirus Program

Potential for first therapy with ongoing lead molecule discovery
- Estimated $60 billion worldwide in annual cost due to direct healthcare expenses and loss of productivity

**2H21:** Complete proof-of-concept animal study

---

### Financial Snapshot

- $67.2 million in cash/equivalents as of 6/30/21
- No debt, no preferred stock, only 243,000 warrants
- Cash runway beyond 2024
