Resonant to Host Fourth Quarter and Full Year 2016 Conference Call on Thursday, March 30th at 1:30 p.m. Pacific time

GOLETA, Calif.--(BUSINESS WIRE)-- Resonant Inc. (NASDAQ: RESN), a designer of filters for radio frequency, or RF, front-ends that specializes in delivering designs for difficult bands and complex requirements, today announced it will release financial results for the year ended December 31, 2016, after market close on Thursday, March 30, 2017.

Management will host an investor conference call at 1:30 p.m. PST (4:30 p.m. EST) on March 30, 2017, to discuss Resonant's year end 2016 financial results, provide a corporate update, and conclude with a Q&A from participants. To participate, please use the following information:

Conference Call and Webcast

Date: Thursday, March 30, 2017

Time: 1:30 p.m. Pacific time

U.S. Dial-in: 1-877-407-3982

International Dial-in: 1-201-493-6780

Conference ID: 13656211

Webcast: <http://public.viavid.com/index.php?id=123096>

Please dial in at least 10 minutes before the start of the call to ensure timely participation.

A playback of the call will be available through April 30, 2017. To listen, call 1-844-512-2921 within the United States or 1-412-317-6671 when calling internationally. Please use the replay pin number 13656211. A webcast will also be available for 30 days on the IR section of the Resonant website or by clicking here: [RESN FY16 Webcast](#).

About Resonant Inc.

Resonant is creating software tools, intellectual property, and licensable blocks that enable the development of innovative filter designs for the RF front-end, or RFFE, for the mobile device industry. The RFFE is the circuitry in a mobile device responsible for the radio frequency signal processing and is located between the device's antenna and its digital baseband. Filters are a critical component of the RFFE that selects the desired radio frequency signals and rejects unwanted signals and noise. For more information, please visit www.resonant.com.

About Resonant's ISN® Technology

Resonant can create designs for difficult filter bands with complex requirements that we believe have the potential to be manufactured for half the cost and developed in half the time

of traditional approaches. The Company's large suite of proprietary mathematical methods, software design tools and network synthesis techniques enable it to explore a much bigger set of possible solutions and quickly derive the best potential designs for the specific filter. These improved filters still use existing manufacturing methods (i.e. surface acoustic wave or SAW) and can perform as well as those using higher cost methods (i.e. bulk acoustic wave or BAW). While most of the industry designs SAW filters using a coupling-of-modes model, Resonant uses circuit models and physical models. Circuit models are computationally much faster, and physical models are highly accurate models based entirely on fundamental material properties and dimensions. Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is eased because its models speak the "fab language" of basic material properties and dimensions.
