

Clean Coal Technologies Hosts Investor Webcast on Wednesday, September 19, 2012

Webcast to Provide Shareholders with Updates on Recent Developments and Information on Ongoing Strategic Initiatives

NEW YORK-- Clean Coal Technologies, Inc. (OTCQB: CCTC) (PINK: CCTC), an emerging cleaner-energy company utilizing patented technology to convert raw coal into a cleaner burning and more efficient fuel, today announced it will be hosting an investor update webcast on Wednesday, September 19, 2012 at 11:00am Eastern.

"We are very pleased to be hosting our quarterly investor webcast," stated Robin Eves, Director, President and CEO of Clean Coal Technologies. "As part of our effort to maintain ongoing communication with our shareholders, this webcast will update investors on various developments, including our recent payments from Archean and Jindal Steel, the latest status updates in regards to the pilot plant, as well as addressing any questions shareholders may have. In addition to our recent developments, we also look forward to providing some color on Clean Coal's upcoming strategic initiatives for the remainder of 2012."

The Clean Coal Technologies investor webcast will be made available on September 19th through the following link: http://www.investorcalendar.com/IC/CEPage.asp?ID=169624

Investors are encouraged to submit questions in advance of the webcast, and live during the event, by sending emails to: cleancoal@trilogy-capital.com with the subject "Clean Coal Webcast."

About Clean Coal Technologies, Inc.

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine™" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants.
