## **Clean Coal Technologies, Inc. Announces Transfer and Installation of Plant at AES Moving Forward**

NEW YORK, NY -- (Marketwired) -- 09/01/15 -- Clean Coal Technologies, Inc. (OTC PINK: CCTC) ("CCTI" or the "Company"), an emerging cleaner-energy company utilizing patented technology to convert raw coal into a cleaner burning and more efficient fuel, today announced that the transfer of the test plant to AES is in high gear. To date we have transferred several of the key components required from our manufacturing facility to AES. In addition, all of the site work at AES has been completed to host the testing. The final three skids are currently being prepared for transport. Once the last skids are transferred to AES we will reconstruct the test facility and commence testing under very tight protocols and with a team of experts on site to ensure the best possible results.

"With all the unique, ground breaking technologies in their final stage before testing, challenges arise daily. Without the very best engineers, scientists, contractors, site engineers, site architects, equipment operators, team leaders and overall project managers, this would be an even bigger challenge. We believe we have assembled a team of market leading experts to address each stage of our validation process," said Robin Eves, CEO and President of CCTI. "We continue to attract attention from around the world and more recently substantial interest from the US which we hope to share with the market shortly. We will continue to update the market as we reach important milestones."

### ***About Clean Coal Technologies, Inc.***

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine<sup>TM</sup>" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants. ### ***Forward Looking Statements***

This release may include forward-looking statements related to CCTI's plans, beliefs and goals, which involve certain risks and uncertainties that could cause actual results to differ materially from those in the forward-looking statements. Such statements include, but are

not limited to, statements about CCTI's plans, objectives, expectations and intentions with respect to future operations, its products, its ability to secure financing for its operations, the impact on the industry and other statements identified by words such as "will," "potential," "could," "can," "believe," "intends," "continue," "plans," "expects," "anticipates," "estimates," "may," and other words of similar meaning or the use of future dates. Additional details about CCTI's business and its operations that could affect CCTI's actual results are described in CCTI's filings with the Securities and Exchange Commission, including the "Risk Factors" that are part of its most recent annual report on Form 10-K for the year ended December 31, 2014 and in each of its subsequently filed periodic reports. All forward-looking statements in this release speak only as of the date of this news release. CCTI undertakes no obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.
