

WFC-1

Great Water™

- ❖ 1 Ton Unit Water Production: 10 Gallons per day
- ❖ 12 Gallon, Stainless Steel Water Storage Tank
- ❖ Size: 24" W x 19" H x 34" L
- ❖ Perfect for Permanent Residence or Vacation Home
- ❖ 1 ton kw 3.5 Volts 120

Mounted outside the home. Cold filtered water is fed into the home or building to a water dispenser. Power system upgrades can be powered by Solar or Wind for energy conservation. GR8 Water wants you to "Never Buy Bottled Water Again".

How it Works:

Air to water generators condense outside air, collect the water in a UV-protected chamber and store it in a continuously ozonated holding tank.

Water drawn from the tank is then filtered through a sediment filter, carbon block filter and passed through an ultraviolet sanitation light.

No additives needed or used. Water amounts may change due to weather conditions

Sustainable Water Solutions.
