# Clean Coal Technologies (CCTC) Announced Today a Business Update

**NEW YORK, NY / ACCESSWIRE / October 5, 2021** /Clean Coal Technologies, Inc., (OTC PINK:CCTC) ("CCTI" or the "Company"), the leading clean-energy company utilizing patented and proven technology to convert run of mine coal into a cleaner burning and more efficient stabilized fuel, today announced a business update.

"We are pleased to announce that we have filed a new Global Provisional Patent granting CCTI global protection on the significantly improved technology and its deployment capabilities of our second-generation plant. This provisional patent was filed on September 24, 2021 and will run in conjunction with our existing patents" stated Mr. Robin Eves, CEO of CCTI.

"Also, following extensive discussions on financing options with our primary investors, management and the Board of Clean Coal Technologies Inc., a restructuring proposal has been approved to present to our shareholders at our next Annual General Meeting. We will be seeking approval to do a share reverse to enable us to raise the necessary funding to complete and commercialize our second-generation plant in Wyoming. At the same time this restructuring will clean up our balance sheet by retiring convertible obligations together with most of the existing debt leaving the company in a strong and commercial position to finalize construction and commissioning of our Wyoming plant. This is a vital step to ensure the medium and long term success of our Company" concluded Eves.

Details of the forthcoming shareholder meeting will be announced in due course.

## **About Clean Coal Technologies, Inc.**

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants.
