Note Regarding the Use of Non-GAAP Financial Measures

The Company has provided certain Non-GAAP financial information, which includes adjustments for special items and certain line items on a constant currency basis, as additional information for its segment revenue, consolidated net income (loss), segment operating income (loss) and Adjusted EBITDA. These measures are not in accordance with, or an alternative for, generally accepted accounting principles ("GAAP") and may be different from Non-GAAP measures reported by other companies.

The Company believes that the presentation of Non-GAAP measures on a constant currency basis and eliminating special items provides useful information to management and investors regarding certain financial and business trends relating to its financial condition and results of operations because they permit evaluation of the results of the Company without the effect of currency fluctuations or special items that management believes make it more

difficult to understand and evaluate the Company's results of operations. Special items include impairments, restructuring and severance as well as certain income or expenses not indicative of the Company's current or future period performance and are more fully disclosed in the tables.

Adjusted EBITDA is defined as earnings or loss before interest, income taxes, depreciation and amortization ("EBITDA") adjusted to exclude share-based compensation expense as well as the special items described above.

Adjusted EBITDA is a performance measure rather than a cash flow measure. The Company believes the presentation of Adjusted EBITDA is relevant and useful for investors because it allows investors to view results in a manner similar to the method used by management.

Adjusted EBITDA has limitations as an analytical tool and should not be considered in isolation from, or as a substitute for, analysis of the Company's results of operations and operating cash flows as reported under GAAP. For example, Adjusted EBITDA: does not reflect capital expenditures or contractual commitments; does not reflect changes in, or cash requirements for, the Company's working capital needs; does not reflect the interest expense, or the cash requirements necessary to service the interest payments, on the Company's debt; and does not reflect cash required to pay income taxes.

The Company's computation of Adjusted EBITDA may not be comparable to other similarly titled measures computed by other companies because all companies do not calculate these measures in the same fashion.
