Place: Le Parker Meridien Hotel, New York

Webcast: <http://ir.cymbabay.com/events>

### **About CymaBay**

CymaBay Therapeutics, Inc. (NASDAQ: CBAY) is a clinical-stage biopharmaceutical company developing therapies to treat metabolic diseases with high unmet medical need, including serious rare and orphan disorders.

Arhalofenate, CymaBay's lead product candidate, has shown two therapeutic actions in a single drug in multiple Phase 2 gout studies. In gout patients, arhalofenate is intended to prevent painful flares in joints while at the same time promoting excretion of uric acid by the kidney, thereby addressing both the signs and symptoms of gout and the hyperuricemia that is the root cause of the disease. CymaBay's second product candidate, MBX-8025 is a potent, selective, orally active PPAR $\delta$  agonist. A Phase 2 study of MBX-8025 in patients with mixed dyslipidemia established that it has an anti-atherogenic lipid profile. The FDA has granted MBX-8025 an orphan drug designation for the treatment of homozygous familial hypercholesterolemia (HoFH) and CymaBay has initiated a pilot study of MBX-8025 in patients with HoFH.
