Resonant Inc. to Participate in the 10th Annual Craig-Hallum Alpha Select Conference

GOLETA, CA / ACCESSWIRE / November 8, 2019 /Resonant Inc. (NASDAQ: RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for mobile handset and wireless devices, is scheduled to attend the 10th Annual Craig-Hallum Alpha Select Conference in New York City. The event is being held on November 12th at the Sheraton New York Times Square Hotel.

Management plans to provide a business update and industry overview focusing on the company's multi-year commercial agreement with the world's leading RF filter manufacturer, the company's unique Infinite Synthesized Networks (ISN®) software design platform, Resonant's high-frequency filters designed specifically using the ISN platform to exceed the exacting requirements of 5G applications, and the company's recently announced partnership with Teledyne Scientific & Imaging to develop manufacturing processes for high frequency, wide bandwidth RF filter solutions. Resonant is the only company to combine an industry leading software design suite, a Filter IP Standard Library, and an IP licensing business model, to meet the rapidly changing needs of the RF market.

Resonant management will host one-on-one meetings throughout the day on Tuesday, November 12th. To schedule a one-on-one meeting or for more information about the conference, please contact your Craig-Hallum representative.

About Resonant Inc.

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fabless ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

Resonant uses its website (<https://www.resonant.com>) and LinkedIn page (<https://www.linkedin.com/company/resonant-inc/>) as channels of distribution of information about its products, its planned financial and other announcements, its attendance at upcoming investor and industry conferences, and other matters. Such information may be deemed material information, and Resonant may use these channels to comply with its disclosure obligations under Regulation FD. Therefore, investors should monitor the company's website and its social media accounts in addition to following the company's press releases, SEC filings, public conference calls, and webcasts.

About Resonant's ISN® Technology

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.
