Resonant to Host Series of ‘5G Insights’ Webinars in October 2020

Panel of Industry Experts to Discuss the Current State of 5G, the Continued Rollout, and What it Means for Consumers

GOLETA, Calif., Sept. 28, 2020 (GLOBE NEWSWIRE) -- Resonant Inc. (NASDAQ: RESN), a leader in transforming the way radio frequency, or RF, front-ends are being designed and delivered for mobile handset and wireless devices, will host a two-part “5G Insights” webinar series on October 6 and 8, 2020. The educational webinars will include industry experts who will discuss the evolution from 1G to 5G, drivers of 5G adoption, the continued role of 4G, next-generation Wi-Fi and the technologies that enable ‘true’ 5G.

The two-part event will feature a panel of industry veterans with extensive backgrounds with companies like Broadcom, Apple, Microsoft, the WiFi Alliance, Qorvo and Skyworks, among others.

The two-part webinar will take place as follows:

Expert Insights on Unlocking the Potential of 5G

This introductory webinar is targeted to those wanting to learn the basics behind 5G and the technology enabling its deployment from a panel of leading industry experts.

Date: Tuesday, October 6, 2020

Time: 4:30 p.m. Eastern Time

Webcast: <https://wsw.com/webcast/cc/resn/1384848>

The Technology Enabling the Transition to 5G

This advanced webinar is targeted to those who have an understanding or want to learn more about the RF Front End, which will focus more on the technical specifics behind the enablement of 5G.

Date: Thursday, October 8, 2020

Time: 4:30 p.m. Eastern Time

Webcast: <https://wsw.com/webcast/cc/resn2/1437948>

To register for either or both events, you can do so using the respective links above.

Live audio webcasts of the “5G Insights” series will be accessible via the webcast links above. A replay for each of the “5G Insights” series will be accessible via the webcast links above, or via the Company’s investor relations website at www.resonant.com through October 6th, 2021.

About Resonant Inc.

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fables ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

Resonant uses its website (<https://www.resonant.com>) and LinkedIn page (<https://www.linkedin.com/company/resonant-inc-/>) as channels of distribution of information about its products, its planned financial and other announcements, its attendance at upcoming investor and industry conferences, and other matters. Such information may be deemed material information, and Resonant may use these channels to comply with its disclosure obligations under Regulation FD. Therefore, investors should monitor the company's website and its social media accounts in addition to following the company's press releases, SEC filings, public conference calls, and webcasts.

About Resonant's ISN[®] Technology

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.
