Resonant to Present at Upcoming Investor Conferences

AUSTIN, Texas, June 03, 2021 (GLOBE NEWSWIRE) -- Resonant Inc. (NASDAQ: RESN), a provider of radio frequency (RF) filter solutions developed on a robust intellectual property platform, designed to connect People and Things, today announced that management will present at the LD Micro Invitational XI investor conference taking place virtually June 8-10, 2021, as well as the Lytham Partners Summer Investor Conference taking place virtually June 14-16, 2021, and the East Coast IDEAS Investor Conference, taking place virtually June 16-17.

Resonant management is scheduled to host a virtual presentation to investors during the event as follows:

2021 LD Micro Invitational XI

Date: Thursday, June 10, 2021

Time: 3:30 p.m. Eastern time (12:30 p.m. Pacific time) – Track 3

Webcast: <https://ldmicrojune2021.mysequire.com>

Lytham Partners Summer 2021 Investor Conference

Date: Wednesday, June 16, 2021

Time: 2:45 p.m. Eastern time (11:45 a.m. Pacific time)

Webcast: <https://www.webcaster4.com/Webcast/Page/2724/41495>

2021 East Coast IDEAS Investor Conference

Date: Wednesday, June 16, 2021

Time: 8:00 a.m. Eastern time (5:00 a.m. Pacific time)

Webcast: www.IDEASconferences.com

A live audio webcast and archive of the event presentation will be available using the webcast links above. For more information on the LD Micro Invitational XI, Lytham Partners Summer Investor Conference, or the East Coast IDEAS Investor Conference, please visit the registration page for each conference using the webcast link.

Resonant's Infinite Synthesized Networks (ISN®), multi-physics Electronic Design Automation (EDA) software platform is used specifically for designing RF filters. RF filters, such as those designed by Resonant, are components embedded into a smartphone that reject and accept the appropriate signals.

As 5G continues to develop and grow in importance, so will the ways RF filters are utilized in everyday life beyond texting, calling or streaming your favorite movie on a smartphone. Soon RF filters will be sited into autonomous and electric vehicles that will help relay when your car is too close to an object, out of its traffic lane or needs to stop, where speed is critical. For example, a one-second delay in the communication link with an RF filter could

equal a delayed stop of 100 feet in a vehicle traveling at approximately 70 mph. In addition, hospitals are beginning to rely on RF filters to eliminate disruptions in their hospital networks, helping minimize the risk for areas such as remote surgery via robotic medical equipment. Put simply, RF filters provide protection for the wireless connectivity to sectors such as traffic, health, weather and environmental monitoring, and allows wireless communication in the same way as computers and smartphones.

About Resonant Inc.

Resonant (NASDAQ: RESN) is transforming the market for RF front-ends (RFFE) by disrupting the RFFE supply chain through the delivery of solutions that leverage our Infinite Synthesized Network (ISN) design software tools platform, capitalize on the breadth of our IP portfolio, and are delivered through our services offerings. In a market that is critically constrained by limited designers, tools and capacity, Resonant addresses these critical problems by providing customers with ever increasing design efficiency, reduced time to market and lower unit costs. Customers leverage Resonant's disruptive capabilities to design cutting edge filters and modules, while capitalizing on the added stability of a diverse supply chain through Resonant's fabless ecosystem-the first of its kind. Working with Resonant, customers enhance the connectivity of current mobile devices, while preparing for the demands of emerging 5G applications.

Resonant uses its website (<https://www.resonant.com>) and LinkedIn page (<https://www.linkedin.com/company/resonant-inc/>) as channels of distribution of information about its products, its planned financial and other announcements, its attendance at upcoming investor and industry conferences, and other matters. Such information may be deemed material information, and Resonant may use these channels to comply with its disclosure obligations under Regulation FD. Therefore, investors should monitor the company's website and its social media accounts in addition to following the company's press releases, SEC filings, public conference calls, and webcasts.

About Resonant's ISN® Design Technology

Resonant can create designs for difficult bands, modules and other complex RF Front End requirements that we believe have the potential to be manufactured for half the cost and developed in half the time of traditional approaches. ISN is a suite of proprietary mathematical methods, software design tools and network synthesis techniques that enable us to explore a much larger set of possible design solutions that regularly incorporate our proprietary technology. We then quickly deliver design simulations to our customers, which they manufacture or have manufactured by one of our foundry partners. These improved

solutions still use Surface Acoustic Wave (SAW) or Temperature Compensated Surface Acoustic Wave (TC-SAW) manufacturing methods and perform as well as those using higher cost manufacturing methods such as Bulk Acoustic Wave (BAW). Resonant's method delivers excellent predictability, enabling achievement of the desired product performance in roughly half as many turns through the fab. In addition, because Resonant's models are fundamental, integration with its foundry and fab customers is seamless because its models speak the "fab language" of basic material properties and dimensions.

Safe Harbor / Forward-Looking Statements

This press release contains forward-looking statements, which include the following subjects, among others: the status of filter designs under development, the capabilities of our filter designs and software tools and the markets they serve, the timing and amount of future unit shipments and revenues, the increased use of agreements with prepaid royalties, and our views on future financial performance and market share. Forward-looking statements are made as of the date of this document and are inherently subject to risks and uncertainties which could cause actual results to differ materially from those in the forward-looking statements, including, without limitation, the following: our limited operating history; our ability to complete designs that meet customer specifications; the ability of our customers (or their manufacturers) to fabricate our designs in commercial quantities; our customers' ability to sell products incorporating our designs to their OEM customers; changes in our expenditures and other uses of cash; the ability of our designs to significantly lower costs compared to other designs and solutions; the risk that the intense competition and rapid technological change in our industry renders our designs less useful or obsolete; our ability to find, recruit and retain the highly skilled personnel required for our design process in sufficient numbers to support our growth; our ability to manage growth; and general market, economic and business conditions. Additional factors that could cause actual results to differ materially from those anticipated by our forward-looking statements are under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations" in our most recent Annual Report (Form 10-K) or Quarterly Report (Form 10-Q) filed with the Securities and Exchange Commission. Forward-looking statements are made as of the date of this release, and we expressly disclaim any obligation or undertaking to update forward-looking statements.
