Clean Coal Technologies, Inc. Announces the Successful Results of their Pristine M Technology Commissioning

NEW YORK, NY / ACCESSWIRE / February 5, 2016 /Clean Coal Technologies, Inc., (OTC: CCTC) ("CCTI" or the "Company"), an emerging cleaner-energy company utilizing patented technology to convert raw coal into a cleaner burning and more efficient fuel, today announced that the latest tests analysed by the Independent Standard laboratory have been very successful.

"Our latest test results carried out on Feb. 2, 2016, reduced the moisture content of the feed coal from 26.93% to ~4.71% in the stabilized coal. Alongside the previous testing results we can confidently say that the moisture level of the stabilized coal can be reduced to levels desired by the end customer. Simply put, we have completely validated the dehydration process section of the Pristine M Technology," said President and CEO, Robin Eves.

"The corresponding increase in heating value of the coal was almost 2,000 Btu/lb., from 8,767 Btu/lb. in the feed coal to 10,744 Btu/lb. in the stabilized coal. The results also showed no degradation of the coal during the process. These are phenomenal results this early in the commissioning process," added Robin Eves President and CEO, who added, "We have validated our ability to address the volatiles whilst increasing the BTU value of the final product. This also validates the Pristine Technology and shows, beyond doubt, that we can produce a cleaner, more energy efficient fuel from the lower ranked coals."

"Whereas these results exceeded our expectations we will continue to run further tests and gather additional data over the coming weeks. These results will act as a benchmark for our continued testing," said Aiden Neary, COO. "We have already identified process improvements that, when implemented, will lead to further optimization of the end coal. These results serve as evidence of just how powerful this technology is and provides us the ability to move to commercialization on an expedited basis as we work to provide a commercial and economically viable solution to the global Coal and Power Industry"

"CCTI and their patent and patent pending technologies have taken an enormous step towards commercializing their technology and the global negotiations will now be validated by the exceptional performance of their technology at the AES Coal Fired Utility at Shady Point with the confident knowledge that results can only improve from here. These are very exciting times for our company, our investors and shareholders," concluded Robin Eves, President and CEO.

About Clean Coal Technologies, Inc.

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in

New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine(tm)" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants. Forward Looking Statements

This release may include forward-looking statements related to CCTI's plans, beliefs and goals, which involve certain risks and uncertainties that could cause actual results to differ materially from those in the forward-looking statements. Such statements include, but are not limited to, statements about CCTI's plans, objectives, expectations and intentions with respect to future operations, its products, its ability to secure financing for its operations, the impact on the industry and other statements identified by words such as "will," "potential," "could," "can," "believe," "intends," "continue," "plans," "expects," "anticipates," "estimates," "may," and other words of similar meaning or the use of future dates. Additional details about CCTI's business and its operations that could affect CCTI's actual results are described in CCTI's filings with the Securities and Exchange Commission, including the "Risk Factors" that are part of its most recent annual report on Form 10-K for the year ended December 31, 2014 and in each of its subsequently filed periodic reports. All forward-looking statements in this release speak only as of the date of this news release. CCTI undertakes no obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.
