The Temporary Freezing of Obama's Climate Policy Could Hasten Adoption of CCTI's Proven New Coal Technology for US Coal and Energy Industries

NEW YORK, NY / ACCESSWIRE / February 11, 2016 /Clean Coal Technologies, Inc., (OTCQB: CCTC) ("CCTI" or the "Company"), an emerging cleaner-energy company utilizing patented technology to convert untreated coal into a cleaner burning and more efficient fuel, recognizes the Supreme Court's decision to freeze the Obama Climate Policy, believing it could lead to wider adoption of their newly proven technology.

"The court's decision to temporarily freeze President Obama's climate policy clearly opens the door for CCTI to aggressively move forward in deploying our proven new technology throughout the United States, to help a wide range of industries continue to use coal for their energy needs," commented CCTI CEO, Robin Eves.

"By removing the moisture, reducing the volatiles, and increasing the BTUs through CCTI's Pristine-M process, a more efficient coal can be burned thereby lowering the carbon footprint for those using coal," he continued.

"CCTI is dedicated to finding a solution and supporting the Coal and Power industries throughout the US and internationally. The continued negative sentiment on the coal industry is unfounded and unwarranted. This decision by the Supreme Court gives us the opportunity to show the world that coal can be used more efficiently, and sustained as a major contributor to the global energy slate by the introduction of proven and economically viable technology," added Mr. Eves.

About Clean Coal Technologies, Inc.

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine(TM)" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants. Forward Looking Statements

This release may include forward-looking statements related to CCTI's plans, beliefs and goals, which involve certain risks and uncertainties that could cause actual results to differ materially from those in the forward-looking statements. Such statements include, but are not limited to, statements about CCTI's plans, objectives, expectations and intentions with respect to future operations, its products, its ability to secure financing for its operations, the impact on the industry and other statements identified by words such as "will," "potential," "could," "can," "believe," "intends," "continue," "plans," "expects," "anticipates," "estimates," "may," and other words of similar meaning or the use of future dates. Additional details about CCTI's business and its operations that could affect CCTI's actual results are described in CCTI's filings with the Securities and Exchange Commission, including the "Risk Factors" that are part of its most recent annual report on Form 10-K for the year ended December 31, 2014 and in each of its subsequently filed periodic reports. All forward-looking statements in this release speak only as of the date of this news release. CCTI undertakes no obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.
