CCTI to Give Major Update Webcast on June 23, 2016

NEW YORK, NY / ACCESSWIRE / June 14, 2016 /Clean Coal Technologies, Inc. ([CCTC](#)) ("CCTI" or the "Company"), a cleaner-energy company utilizing patented technology to convert raw coal into a cleaner burning and more efficient fuel, today announced that they will hold a webcast on Thursday, June 23, 2016 to update the market on significant developments as the technology moves closer to playing a leading role in sustaining coal as a major force in providing power to the global power markets.

"Management will update the markets on successful strategic meetings with the US Government, State governors / legislatures and domestic and international coal and power companies including one of the largest Chinese Coal and Power companies," said Robin Eves President and CEO, adding that, "we will also update the market on the progress in designing and engineering the first commercial modules."

"It is a long and tough road from a successful test plant to the design, engineering and successful building of a commercial plant but we now have incredible support both domestically and internationally and are on course to have the first major technology successfully deployed around the world," concluded Mr. Eves.

Details of the webcast will be posted on the company website in the coming days on www.cleancoaltechnologiesinc.com.

About Clean Coal Technologies, Inc.

Clean Coal Technologies, Inc., a cleaner-energy technology company with headquarters in New York City, NY, holds patented process technology and other intellectual property that converts raw coal into a cleaner burning fuel. The Company's trademarked end products, "Pristine™" coals, are significantly more efficient, less polluting, more cost-effective, and provide more heat than untreated coal. The principal elements of the Company's pre-combustion technology are based on well-proven science and tried-and-tested industrial components. The Company's clean coal technology may reduce some 90% of chemical pollutants from coal, including Sulfur and Mercury, thereby resolving emissions issues affecting coal-fired power plants.
