ContraFect to Present at 2017 Cantor Fitzgerald Global Healthcare Conference

YONKERS, N.Y., Sept. 13, 2017 (GLOBE NEWSWIRE) -- [ContraFect Corporation](#) (NASDAQ:CFRX), a biotechnology company focused on the discovery and development of protein and antibody therapeutics for life-threatening, drug-resistant infectious diseases, today announced that Steven C. Gilman, Ph.D., the Company's Chairman and Chief Executive Officer, will present a corporate overview at the 2017 Cantor Fitzgerald Global Healthcare Conference on Wednesday, September 27, 2017 at 3:25 PM ET in New York, NY. The focus of the presentation will be on ContraFect's lead program, CF-301, currently in a Phase 2 clinical trial, and the Company's novel approach to the treatment of drug-resistant *Staphylococcus aureus* (*Staph aureus*) infections, including MRSA.

The presentation will be available as a webcast for a limited time. To access via the Company's website, please go to www.contrafect.com. To access the webcast directly, please use the following URL:

About ContraFect:

ContraFect is a biotechnology company focused on discovering and developing therapeutic protein and antibody products for life-threatening, drug-resistant infectious diseases, particularly those treated in hospital settings. An estimated 700,000 deaths worldwide each year are attributed to antimicrobial-resistant infections. We intend to address life threatening infections using our therapeutic product candidates from our lysin and monoclonal antibody platforms to target conserved regions of either bacteria or viruses (regions that are not prone to mutation). ContraFect's initial product candidates include new agents to treat antibiotic-resistant infections such as MRSA (Methicillin-resistant *Staph aureus*) and influenza. ContraFect is also conducting research focused on the discovery of lysins to target Gram-negative bacteria.

About CF-301:

CF-301 is a recombinant bacteriophage-derived lysin with potent bactericidal activity against *Staphylococcus aureus* (*Staph aureus*), a major cause of blood stream infections, or bacteremia. CF-301 has the potential to be a first-in-class treatment for *Staph aureus* bacteremia. It has a novel, rapid, and specific mechanism of bactericidal action against *Staph aureus* and therefore should not impact the body's natural bacterial flora. By targeting

a conserved region of the cell wall that is vital to bacteria, resistance is unlikely to develop to CF-301. Combinations of CF-301 with standard of care (SOC) antibiotics significantly increased bacterial killing and survival in animal models of disease when compared to treatment with antibiotics or CF-301 alone. In addition, *in vitro* and *in vivo* experiments have shown that CF-301 is highly active against biofilm infections. CF-301 was licensed from The Rockefeller University and is being developed at ContraFect and is the first lysin to enter clinical studies in the U.S.

Forward-Looking Statements

This press release contains, and our officers and representatives may make from time to time, "forward-looking statements" within the meaning of the U.S. federal securities laws. Forward-looking statements can be identified by words such as "projects," "may," "will," "could," "would," "should," "believes," "expects," "anticipates," "estimates," "intends," "plans," "potential," "promise" or similar references to future periods. Examples of forward-looking statements in this release include, without limitation, statements regarding our ability to discover and develop protein and antibody therapeutics for life-threatening, drug-resistant infectious diseases, our ability to address life threatening infections using our therapeutic product candidates from our lysin and monoclonal antibody platforms to target conserved regions of either bacteria or viruses, whether our initial product candidates can treat antibiotic-resistant infections such as MRSA (Methicillin-resistant *Staph aureus*) and influenza, our ability to discover new lysins targeting Gram-negative bacteria, and the potential for CF-301 to be a first-in-class treatment for *Staph aureus* bacteremia. Forward-looking statements are statements that are not historical facts, nor assurances of future performance. Instead, they are based on ContraFect's current beliefs, expectations and assumptions regarding the future of its business, future plans, strategies, projections, anticipated events and trends, the economy and other future conditions. Because forward-looking statements relate to the future, they are subject to inherent risks, uncertainties and changes in circumstances that are difficult to predict and many of which are beyond ContraFect's control, including those detailed in ContraFect's filings with the Securities and Exchange Commission. Actual results may differ from those set forth in the forward-looking statements. Important factors that could cause actual results to differ include, among others, our ability to develop treatments for drug-resistant infectious diseases. Any forward-looking statement made by ContraFect in this press release is based only on information currently available and speaks only as of the date on which it is made. Except as required by applicable law, ContraFect expressly disclaims any obligations to publicly update any forward-looking statements, whether written or oral, that may be made from time to time, whether as a result of new information, future developments or otherwise.
